## Product Description

Granular Activated Carbon / Pellet Carbon / For Water Treatment / Black

Granular activated carbon is a type of activated carbon that is available in the form of small granular particles. It is produced by pulverizing activated carbon into small particles and then screening it to achieve a specific particle size range.

Activated carbon has a high surface area and is highly porous, making it an effective adsorbent for removing impurities from liquids and gases.

It is commonly used in water treatment systems, air purification systems, and industrial processes such as gas separation and solvent recovery.
