Product Description

Wood Derived Activated Carbon / Activated Carbon Coal / Industrial Processes

Raw material source: This kind of activated carbon usually comes from wood materials such as wood chips, sawdust, wood chips, fruit shells and so on.

Processing: These raw materials are carbonized and activated to transform them into activated carbon with a highly developed pore structure.

Environmental Properties: As a by-product of wood or a resource from sustainable forest management, Wood-Derived Activated Carbon is considered an environmentally friendly material.

Adsorption Properties: It has a strong adsorption capacity and can effectively remove organic pollutants, odors and pigments from gases and liquids.

Applications: It is widely used in water treatment, air purification, solvent recovery, sugar refining, metal extraction and other industrial purification processes.
