## Product Description

Nano Sized Activated Carbon From Wood / Removes Sulfur Dioxide And Nitrogen

It is a type of activated carbon made from wood with particle sizes down to the nanometer scale, a material that typically has a high adsorption capacity and a fast adsorption rate.

Properties & Benefits:

Huge surface area: due to its nano-sized particle size, this activated carbon has an unusually high surface area, providing more adsorption sites.

Highly efficient adsorption performance: Highly efficient adsorption of organic compounds, heavy metals and other pollutants in gases and liquids.

Fast adsorption rate: Nano-sized particles allow pollutants to be adsorbed more quickly, reducing treatment time.

Wide applicability: Applicable to many fields such as water treatment, air purification, medicine and food processing.
