

Black Wood Powder Activated Carbon In Water Treatment Pollutants Adsorption

Our Product Introduction

Basic Information

- Place of Origin: Datong, Shanxi, China
- Brand Name: Xinyue
- Minimum Order Quantity: 1 Ton
- Packaging Details: 500kg/bag , 25kg/bag
- Payment Terms: T/T
- Supply Ability: 100,000 Ton/Tons per Year

Product Specification

- CAS No: 64365-11-3
- Purity: 99.99%
- Type: Adsorbent
- Iodine Number: 800-1200mg/g
- Ash: <12
- Moisture: <5%
- EINECS No: 264-846-4
- Package: 500kg/bag Or 25kg/bag
- Hardness: >95%
- Highlight: **Black Wood Powder Activated Carbon, Wood Powder Activated Carbon Adsorption, Wood Activated Carbon In Water Treatment**

Product Description

Activated Carbon Powder In Water Treatment / Effective Adsorption Of Pollutants

Removal of organic substances: Powdered activated carbon effectively adsorbs dissolved organic compounds from water that may be the result of industrial emissions or agricultural activities. Through adsorption, powdered activated carbon helps to reduce the formation of disinfection by-products, which can be a health hazard.

Removes chlorine and flavour: Chlorine is commonly used for disinfection during water treatment, but residual chlorine can be harmful. Powdered activated carbon adsorbs this residual chlorine and keeps water safe. Powdered activated carbon removes odours produced by algal blooms or other natural processes, enhancing the taste and smell of water.

Improve drinking water quality: Powdered activated carbon is becoming more and more common in household water treatment equipment, which can help remove residual chlorine, odour and some harmful substances from tap water, improving the taste and safety of drinking water.
