

Black Adsorbent Powder Activated Carbon Filtration Water Pollution Response

Our Product Introduction

for more products please visit us on activatedcarbon-charcoal.com

Basic Information

- Place of Origin: Datong, Shanxi, China
- Brand Name: Xinyue
- Minimum Order Quantity: 1 Ton
- Packaging Details: 500kg/bag , 25kg/bag
- Payment Terms: T/T
- Supply Ability: 100,000 Ton/Tons per Year

Product Specification

- CAS No: 64365-11-3
- Purity: 99.99%
- Type: Adsorbent
- Iodine Number: 800-1200mg/g
- Ash: <12
- Moisture: <5%
- EINECS No: 264-846-4
- Package: 500kg/bag Or 25kg/bag
- Hardness: >95%
- Highlight: **Powder Activated Carbon Filtration, Adsorbent Powder Activated Carbon, Black Activated Carbon Filtration**

Product Description

Activated Carbon Powders / Filtration / Water Pollution Response / Black

Water treatment: Carbon powders play an important role in water treatment, especially in the removal of organic pollutants, chlorine, odours and colours from water. Through their porous structure, carbon particles effectively adsorb harmful compounds in water, thus improving the safety and potability of water.

Air Purification: In the field of air purification, carbon particles can be used to adsorb harmful airborne gases and odours, including formaldehyde, benzene and other volatile organic compounds (VOCs). This use is particularly important in indoor air quality and industrial emission control, helping to improve air quality and reduce environmental impact.

Food and Beverage Processing: In the food and beverage industry, carbon particles are used to remove unwanted colours and odours as well as certain harmful substances from products, helping to improve product quality and taste. For example, in the refining of sugar, carbon particles are used to remove colour and improve purity.
