

Water Purification Powder Activated Carbon Medical Activated Carbon

Our Product Introduction

for more products please visit us on activatedcarbon-charcoal.com

Basic Information

- Place of Origin: Datong, Shanxi, China
- Brand Name: Xinyue
- Minimum Order Quantity: 1 Ton
- Packaging Details: 500kg/bag , 25kg/bag
- Payment Terms: T/T
- Supply Ability: 100,000 Ton/Tons per Year

Product Specification

- CAS No: 64365-11-3
- Purity: 99.99%
- Type: Adsorbent
- Iodine Number: 800-1200mg/g
- Ash: <12
- Moisture: <5%
- EINECS No: 264-846-4
- Package: 500kg/bag Or 25kg/bag
- Hardness: >95%
- Highlight: Water Purification Powder Activated Carbon ,
Medical Powder Activated Carbon ,
Water Purification Medical Activated Carbon

Product Description

Activated Carbon For Water Purification / Medical Activated Carbon

Household water purification: In household water purification systems, activated carbon is widely used in filter jugs, water purifiers and other devices to remove residual chlorine, odours and harmful organic substances from tap water, ensuring the safety and taste of drinking water.

Municipal water treatment: In municipal water treatment plants, activated carbon is used to further purify water that has already undergone preliminary treatment, and is particularly effective in coping with seasonal increases in organic pollution loads, such as the algal bloom season.

Activated carbon treatment effectively removes organic pollutants from the water and improves the safety and stability of the water supply.

Industrial Wastewater Treatment: In the industrial field, activated carbon is not only used in wastewater treatment to remove harmful substances and meet the discharge standards, but also used in the deep treatment of water reuse systems to help enterprises save water resources and reduce environmental pollution.

Emergency water treatment: In the event of natural disasters such as floods or accidental water pollution, activated carbon can be quickly put into use as an emergency treatment technology for the surface treatment of large water sources, effectively guaranteeing the safety of drinking water.
