

Industrial Adsorption Activated Carbon For Water Purification Harmful Substances

Our Product Introduction

for more products please visit us on activatedcarbon-charcoal.com

Basic Information

- Place of Origin: Datong, Shanxi, China
- Brand Name: Xinyue
- Minimum Order Quantity: 1 Ton
- Packaging Details: 500kg/bag , 25kg/bag
- Payment Terms: T/T
- Supply Ability: 100,000 Ton/Tons per Year

Product Specification

- CAS No: 64365-11-3
- Type: Adsorbent
- Iodine Number: 800-1200mg/g
- Ash: <12
- Moisture: <5%
- EINECS No: 264-846-4
- Package: 500kg/bag Or 25kg/bag
- Hardness: >95%
- Highlight: Industrial Adsorption Activated Carbon,
Water Purification Adsorption Activated Carbon
,
Adsorption Activated Carbon For Water
Purification

Product Description

Industrial Purification Activated Carbon / Adsorption Of Harmful Substances In Water

Characteristics:

Industrial purification activated carbon has a well-developed pore structure, which can provide a large number of adsorption surfaces. Its adsorption performance depends on its surface area, pore size distribution and surface chemical properties, which determine its adsorption capacity for different substances.

Application areas:

Water treatment: In industrial water and wastewater treatment, activated carbon is used to remove organic pollutants, heavy metals, residual chlorine and pigments, ensuring that the water quality meets environmental standards and production requirements.

Air purification: In industrial environments, activated carbon is used to remove harmful gases, odours and volatile organic compounds (VOCs) from the air, improving the working environment and emission quality.

Chemical purification: In chemical production, activated carbon is used to purify chemicals, remove impurities and unwanted by-products, and improve product quality.

Gas depressurization and denitrification: In the energy industry, activated carbon is used for depressurization and denitrification of gases to reduce emissions of greenhouse gases and other pollutants.
