

Black Activated Carbon For Water Filtration / Clarification / Decolourisation

Our Product Introduction

Basic Information

- Place of Origin: Datong, Shanxi, China
- Brand Name: Xinyue
- Minimum Order Quantity: 1 Ton
- Packaging Details: 500kg/bag , 25kg/bag
- Payment Terms: T/T
- Supply Ability: 100,000 Ton/Tons per Year

Product Specification

- CAS No: 64365-11-3
- Type: Adsorbent
- Iodine Number: 800-1200mg/g
- Ash: <12
- Moisture: <5%
- EINECS No: 264-846-4
- Package: 500kg/bag Or 25kg/bag
- Hardness: >95%
- Highlight: **Black Activated Carbon For Water Filtration, Activated Carbon For Water Filtration Clarification**

Product Description

Activated Carbon For Wastewater Filtration / Clarification / Decolourisation

Application areas

Removal of organic pollutants: Activated carbon can effectively remove organic compounds such as phenols and aldehydes from wastewater through adsorption. These organic compounds usually come from industrial wastewater, domestic sewage and agricultural wastewater, which, if left untreated, can seriously pollute water bodies and threaten ecological security.

Heavy metal adsorption: activated carbon can also adsorb heavy metal ions in wastewater, such as lead, mercury, cadmium, etc., to achieve the purpose of water purification.

Decolourisation and deodorisation: activated carbon can also remove pigments and odorous substances from wastewater, making the wastewater clear and odourless. This is important for improving the water quality and the reusability of wastewater.
