## Product Description

### Wastewater Refinement Activated Carbon / Deodorisation / Wastewater Treatment

It is a wastewater adsorption treatment method, which uses the physical adsorption, chemical adsorption, oxidation, catalytic oxidation and reduction properties of activated carbon to remove a wide range of pollutants from wastewater.

Activated carbon has a very large number of micropores and a huge specific surface area, which can effectively adsorb organic pollutants in wastewater.

Meanwhile, the oxygen-containing functional groups formed on the non-crystalline parts of the surface of the activated carbon, such as carboxyl, hydroxyl, carbonyl, etc., make the activated carbon have the performance of chemical adsorption and catalytic oxidation and reduction, which can effectively remove some metal ions in wastewater.
