Product Description

8x30/12x40 Mesh 600-1100 Iodine Wood Base Powder Activated Carbon

This wood base powder activated carbon with a mesh size of 8x30/12x40 and an iodine value ranging from 600 to 1100 is a highly effective filtration and purification solution.

The specific mesh size ensures optimal particle distribution for efficient adsorption. It allows for better contact with contaminants, enabling the activated carbon to capture and remove a wide range of impurities.

The high iodine value indicates a strong adsorption capacity. This makes it particularly useful for applications such as water treatment, air purification, and industrial processes where the removal of organic compounds, odors, and toxins is essential.
